Many disenchanted Kashmiris continue to demand independence or freedom from India. Written by a leading authority on Kashmir's troubled past, this book revisits the topic of independence for the region (also known as Jammu and Kashmir, or J&K), and explores exactly why this aspiration has never been fulfilled. In a rare India-Pakistan agreement, they concur that neither J&K, nor any part of it, can be independent. Charting a complex history and intense geo-political rivalry from Maharaja Hari Singh's leadership in the mid-1920s to the present, this book offers an essential insight into the disputes that have shaped the region. As tensions continue to rise following government-imposed COVID-19 lockdowns, Snedden asks a vital question: what might independence look like and just how realistic is this aspiration?

This first of three volumes starts with a short introduction to historical metrology as a scientific discipline and goes on with an anthology of acient and modern measurement systems of all kind, scientific measures, units of time, weights, currencies etc. It concludes with an exhaustive list of references. Units of measurement are of vital importance in every civilization through history. Since the early ages, man has through necessity devised various measures to assist him in everyday life. They have enabled and continue to enable us to trade in commonly and equitably understood amounts, and to investigate, understand, and control the chemical, physical, and biological processes of the natural world. The essence of the work is an alphabetically ordered, comprehensive list of measurement nomenclature, units and scales. It provides an understanding of almost all quantitative expressions observed in all imaginable situations, including spelling variants and the abbreviations and symbols for units, and various acronyms used in metrology. It will be of use not only to historians of science and technology, but also to economic and social historians and should be in every major academic and national library as standard reference work on the topic.

The actual beginnings of astrology are unknown and unknowable. The science emerges already highly refined from the utter obscurity of the pre-historic world. The ends of astrology are also unknown. There is already evidence that the perfection of this science will elevate man to an intellectual and social condition far beyond the limitations of our present consciousness. -from “Astrology's Place in the Modern World” In this concise book, one of the preeminent metaphysicists of the 20th century gives us an extraordinarily informative and entertaining survey of the astrological disciplines and beliefs of the ancient Chinese, Tibetans, HIndus, Greeks, Romans, Aztecs, and Arabians. Then, his discussions of astrology as science, religion, and philosophy bring this paranormal system into the contemporary world, and he explains how, in his estimation, that the heavenly bodies, acting as the “foci of intellectual energy,” dramatically sway the course of civilization itself. O Asvins, with horses that flew with swift wings ye delivered Bhujyu from distress. To the son of Tugra who had invoked you at the ocean, Asvins, ye with your chariot swift as thought, well-harnessed, carried him off, O Mighty Ones, to safety. To he who was blinded, O Asvins, ye gave eyes. Great and weal-giving is your aid, O Asvins, ye made whole the cripple. Ye saved Rebha from tyranny. Ye made the barren cow of Sayu stream refreshing milk, and Vandana was helped with extended life. Doers of marvels, skilful workers, ye restored Vandana, like a vehicle worn out with length of days. From earth ye brought the sage to life in wondrous mode. As charioteers skilled in driving, ye then went to him who mourned in a far distant place, him who was left forlorn by treachery of his sire. Rich with the light of heaven was then the help ye gave, and marvellous your succour when ye stood by him.”
