communicate with each other directly instead of relying on a base station or access points as in wireless LANs for data transfer co-ordination.

*What is ad-hoc network? -
Tutorials point*

A wireless ad-hoc network (WANET) is

Read PDF Ad Hoc Le Wireless Networks

A type of local area network (LAN) that is built spontaneously to enable two or more wireless devices to be connected to each other without requiring a central device, such as a router or access point. When Wi-Fi networks are in ad-hoc mode, each device in the network forwards data to the others.

What is an Ad-Hoc Wireless Network?

The ad hoc wireless LAN is created by two or more computers that have configured their wireless LAN settings to be the same. This matching of wireless LAN settings allows the computer to form a direct network
