The back-staff was invented by John Davis in 1590 and it allowed the navigator to stand back from the sun and work with the shadows. It was a great invention for one of the problems with the cross-staff was that you have to look at the sun and this led to blindness and damage to the navigator's eyes but, the back-staff worked with the shadows of the sun which helped obtain altitude.

In "Age of Discovery", Ian Goldin & Chris Kutarna have given us an engrossing and illuminating account of the connections between the past eras of discovery, the world in which we find ourselves today, and the future towards which, we are hurtling at break-neck speed. A thought-provoking book which will leave us both uneasy, but also hopeful.

---

Age of Discovery: Navigating the Risks and Rewards of Our ...

Navigation in the Indo-Pacific began with the maritime migrations of the Austronesians from Taiwan who spread southwards into Island Southeast Asia and Island Melanesia during a period between 3000 to 1000 BC. Their first long-distance voyaging was the colonization of Micronesia from the Philippines at around 1500 BC.

---

History of navigation - Wikipedia

The great names of Da Vinci, Galileo, Copernicus, Raphael and Michelangelo were the mark of an age that saw a rush of discovery, the breaking down of barriers of ignorance and a newly connected world both politically and economically. Goldin and Kutarna say that the same forces are at work today.

The present is a contest between the bright and dark sides of discovery. To avoid being torn apart by its stresses, we need to recognize the fact—and gain courage and wisdom from the past. Age of Discovery shows how. Now is the best moment in history to be alive, but we have never felt more anxious or divided. Human health, aggregate wealth and education are flourishing. Scientific discovery is racing forward. But the same global flows of trade, capital, people and ideas that make gains possible for some people deliver big losses to others—and make us all more vulnerable to one another. Business and science are working giant revolutions upon our societies, but our politics and institutions evolve at a much slower pace. That ’ s why, in a moment when everyone ought to be celebrating giant global gains, many of us are righteously angry at being left out and stressed about where we ’ re headed. To make sense of present shocks, we need to step back and recognize: we ’ ve been here before. The first Renaissance, the time of Columbus, Copernicus, Gutenberg and others, likewise redrew all maps of the world, democratized communication and sparked a flourishing of creative achievement. But their world also grappled with the same dark side of rapid change: social division, political extremism, insecurity, pandemics and other unintended consequences of

# Download Ebook Age Of Discovery Navigating The Risks And Rewards Of Our New Renaissance

discovery. Now is the second Renaissance. We can still flourish—if we learn from the first.

Now is humanity's best moment. And our most fragile. Global health, wealth and education are booming. Scientific discovery is flourishing. But the same forces that make big gains possible for some of us deliver big losses to others—and tangle us together in ways that make everyone vulnerable. We've been here before. The first Renaissance, the time of Columbus, Copernicus, Gutenberg and others, redrew all maps of the world, liberated information and shifted Western civilization from the medieval to the early modern era. Such change came at a price: social division, political extremism, economic shocks, pandemics and other unintended consequences of human endeavour. Now is our second Renaissance. In the face of terrorism, Brexit, refugee crises and the global impact of a Trump presidency, we can flourish—if we heed the urgent lessons of history. *Age of Discovery*, revised and updated for this paperback edition, shows us how.

Now is humanity's best moment. And our most fragile. Global health, wealth and education are booming. Scientific discovery is flourishing. But the same forces that make big gains possible for some of us deliver big losses to others—and tangle us together in ways that make everyone vulnerable. We've been here before. The first Renaissance, the time of Columbus, Copernicus, Gutenberg and others, redrew all maps of the world, liberated information and shifted Western civilization from the medieval to the early modern era. Such change came at a price: social division, political extremism, economic shocks, pandemics and other unintended consequences of human endeavour. Now is our second Renaissance. In the face of terrorism, Brexit, refugee crises and the global impact of a Trump presidency, we can flourish—if we heed the urgent lessons of history. *Age of Discovery*, revised and updated for this paperback edition, shows us how.

The *Age of Discovery* explores one of the most dramatic features of the late medieval and early modern period: when voyagers from Western Europe led by Spain and Portugal set out across the world and established links with Africa, Asia and the Americas. This book examines the main motivations behind the voyages and discusses the developments in navigation expertise and technology that made them possible. This second edition brings the scholarship up to date and includes two new chapters on the important topics of the idea of "discovery" and on biological and environmental factors which favoured or limited European expansion.

A fascinating blend of poetry and science, Ben-Oni's poems are precisely crafted, like a surgeon sewing a complicated stitch. The speaker of the collection falls ill, and takes comfort in exploring the idea of "Efes" which is "zero" in Modern Hebrew, using that nullification to be a means of transformation.

By the middle of the nineteenth century, as scientists explored the frontiers of polar regions and the atmosphere, the ocean remained silent and inaccessible. The history of how this changed—of how the depths became a scientific passion and a cultural obsession, an engineering challenge and a political attraction—is the story that unfolds in *Fathoming the Ocean*. In a history at once scientific and cultural, Helen Rozwadowski shows us how the Western imagination awoke to the ocean's possibilities—in maritime novels, in the popular hobby of marine biology, in the youthful sport of yachting, and in the laying of a trans-Atlantic telegraph cable. The ocean emerged as important new territory, and scientific interests intersected with those of merchant-industrialists and politicians. Rozwadowski documents the popular crazes that coincided with these interests—from children's sailor suits to the home aquarium and the surge in ocean travel. She describes how, beginning in the 1860s, oceanography moved from yachts onto the decks of oceangoing vessels,

## Download Ebook Age Of Discovery Navigating The Risks And Rewards Of Our New Renaissance

and landlubber naturalists found themselves navigating the routines of a working ship's physical and social structures. Fathoming the Ocean offers a rare and engaging look into our fascination with the deep sea and into the origins of oceanography—origins still visible in a science that focuses the efforts of physicists, chemists, geologists, biologists, and engineers on the common enterprise of understanding a vast, three-dimensional, alien space.

The Red Planet has been a subject of fascination for humanity for thousands of years, becoming part of our folklore and popular culture. The most Earthlike of the planets in our solar system, Mars may have harbored some form of life in the past and may still possess an ecosystem in some underground refuge. The mysteries of this fourth planet from our Sun make it of central importance to NASA and its science goals for the twenty-first century. In the wake of the very public failures of the Mars Polar Lander and the Mars Climate Orbiter in 1999, NASA embarked on a complete reassessment of the Mars Program. Scott Hubbard was asked to lead this restructuring in 2000, becoming known as the "Mars Czar." His team's efforts resulted in a very successful decade-long series of missions—each building on the accomplishments of those before it—that adhered to the science adage "follow the water" when debating how to proceed. Hubbard's work created the Mars Odyssey mission, the twin rovers Spirit and Opportunity, the Mars Reconnaissance Orbiter, the Phoenix mission, and most recently the planned launch of the Mars Science Laboratory. Now for the first time Scott Hubbard tells the complete story of how he fashioned this program, describing both the technical and political forces involved and bringing to life the national and international cast of characters engaged in this monumental endeavor. Blending the exciting stories of the missions with the thrills of scientific discovery, Exploring Mars will intrigue anyone interested in the science, the engineering, or the policy of investigating other worlds.

New York Times bestselling author Maria Snyder returns with a compelling new sci-fi series. Perfect for fans of Star Wars and Poison Study. 2019 PRISM Award Winner: Young Adult Category Year 2471. A new discovery. Those three words thrill my parents – the galaxy's leading archaeologists – but for me, it means another time jump to a different planet. One so big, my friends will be older than my dad when we arrive. And I'll still be seventeen. Thanks, Einstein. I really can't blame Einstein, though. No one expected to find life – sized terracotta warriors buried on other planets. So off we go to investigate, traveling through space and time. With my social life in ruins, I fill my days illegally worming into the quantum net – the invention that allows us to travel in space. Of course the only person close to my age is a hot – but – pain – in – the – neck security officer who threatens to throw me into the brig. But when one of the warrior planets goes silent, we have bigger problems on our hands. The planet's entire population might be dead. And now my worming skills, along with a translation of an ancient alien artefact, might be the key to finding out why. But my attempts to uncover the truth lead to the discovery of a deadly new alien phenomenon, and also alert those who wish to keep it quiet. The galaxy is in real danger and time is not on our side... A page – turning story of courage and determination in the face of the unknown. PRAISE for Maria V. Snyder: 'YA with a pretty strong romantic thread and HUGE adult crossover appeal. The plot is fantastic, the pacing spectacular, the intricacies, the snark, the banter...oh my! Go, go, go. You'll love this!' Amanda Bouchet, USA Today bestselling author of The Kingmaker Chronicles. 'Smart, witty and full of heart, Navigating the Stars had me hooked from the very first page!' – Lynette Noni, bestselling author of Weapon & The Medoran Chronicles

Scientific discovery changes the world! Discover the fascinating story behind one of the most important changes to nautical navigation in this nonfiction book for young readers. More than 300 years ago, explorers wandered the seas using unreliable maps. What they needed to know was the longitude of their locations, but for that they needed accurate time keeping. Unfortunately, no accurate source of time measurement at sea existed. In 1714 the British government decided to offer a reward to anyone who could solve the problem. Learned men and great thinkers alike tried unsuccessfully to work out a

## Download Ebook Age Of Discovery Navigating The Risks And Rewards Of Our New Renaissance

solution. They declared it unsolvable! Carpenter John Harrison was intrigued; he thought he might have a solution. He worked for years to design a clock that functioned accurately at sea, even though no one believed he could do it. Even after his timepiece was demonstrated effective at sea, he was still not acknowledged for his ingenious solution. It took many years and intervention by the king to grant Harrison the recognition and reward he deserved for solving the problem of how to accurately track longitude and for winning the British government prize. The book offers a detailed map of the world at that time and includes the advancements in the use of longitude since then.

Donald Launer has held a US Coast Guard captain's license for over 25 years. He was Field Editor for the yearly Waterway Guide and he is currently contributing editor for Good Old Boat. He is the author of Dictionary of Nautical Acronyms and Abbreviations and Lessons from My Good Old Boat.
