Related work: Critical care nursing / [edited by] Patricia Gonce Morton, Dorrie K. Fontaine. 9th ed. c2009.

*Critical Care Nursing: A Holistic Approach* focuses on exactly what the critical care nurse needs to know by pinpointing the nurse's role and nursing interventions. This classic text and reference, now in its 11th edition, maintains its popular holistic approach to the complexities of critical care nursing. The book's comprehensive, yet manageable coverage begins with the psychosocial concepts of care and progresses through assessment and management of a variety of disorders. Presenting theory and principles within the context of practical application helps students gain competence and confidence in caring for critically ill patients and their families. As always, the patient as the center of the health care team's efforts is emphasized throughout. The 11th edition, led by nationally known expert Dr. Morton, provides excellent contributing authors, the latest research in health care and nursing, smart organization of the material with features that promote critical thinking throughout, and outstanding photographs and illustrations to engage learners. The clear, concise writing style, organization of material, and specially designed features like Evidence-Based Practice Highlights, Considerations of Older Patients boxes, and Case Studies with Critical Thinking Study Questions assist students in understanding the pathophysiological basis for illness and the strategies the critical care nurse uses in assessing and managing patients. The text is completely updated with the most current research in health care and nursing education, with an improved art program, and easily navigated design. *Critical Care Nursing* is the book all critical care students need to strengthen thinking and decision making skills for a successful career in critical care nursing. KEY FEATURES: - NEW! QSEN icon signals pertinent content within the text. - Learning Objectives help students focus on important content. - Case Studies with Critical Thinking Study Questions guide students on the journey from knowledge to practical application. - Considerations for Older Patients boxes highlight the special needs of the fastest growing segment of our population. - Patient Safety boxes guide safe and effective practice by alerting the critical care nurse of risk factors, signs and symptoms, side effects, and complications. - Health History boxes summarize key areas that should be covered and relevant information that may be revealed during the health history. - Collaborative Care Guides, presented in a tabular format containing outcomes and interventions, describe how the health care team works together to manage a patient's illness and minimize complications. - Teaching Guides help the critical care nurse to prepare patients and family members for procedures, assist patients and family members with understanding the illness they are dealing with, explain post-procedure or postoperative activities, or prepare a patient for discharge from the hospital. - Drug Therapy tables summarize information related to the administration and monitoring of drug therapy. - Spotlight on Genetics boxes, appearing in select chapters, help students understand how genetic factors influence disorders. - Nursing Diagnosis boxes use common NANDA terminology to summarize common nursing diagnoses for particular conditions. - Evidence-Based Practice Highlights emphasize the importance of research-based practice.

Now in its Ninth Edition, this classic text and reference maintains its popular holistic approach to the complexities of critical care nursing. The book's comprehensive coverage begins with the psychosocial concepts of care and progresses through assessment and management of a variety of disorders. Now under the lead authorship of Tricia Morton, this revision of the classic Hudak text maintains the goal of promoting excellence in critical care. The second author, Dorrie Fontaine, is the Past-President of the American Association of Critical Care Nurses, and each chapter was written by a subject matter expert to ensure the most up-to-date and accurate information. Presenting theory and principles within the context of practical application helps the reader to gain competence and confidence in caring for critically ill patients and their families. As always, the patient as the center of the health care team's efforts is emphasized throughout. A bound-in CD-ROM and companion Website include an NCLEX® alternate item format tutorial, a Spanish-English audio glossary, drug monographs, Nursing Professional Roles and Responsibilities (Flash and PDF), and Concepts in Action animations.

This completely revised tenth edition of this clinical text is equally useful to nursing students and practising critical care nurses. New information on conscious sedation, management of agitated delirium and AICD have been added.

This book is organized into five parts, the first two of which cover areas applicable to all critical care patients, including the patient's and family's experience, education, pain management, ethical and legal issues, and the rewards and challenges of critical care nursing. The third part addresses specific populations, including pediatric patients, pregnant women, older adults, and postanesthesia patients, as well as interfacility transport. The balance of the book is arranged by body systems and concludes with multisystem problems. This is the seventh edition of a text first published in 1973 and last published in 1994. The purpose is to present current, comprehensive, and practical information built on a holistic perspective of care in which the patient is the core of nursing practice. This book meets a need for educating students and nurses in the critical care environment. The editors' objective of providing a framework for focusing on patient responses in the critical care environment is met. This book is intended for students in critical care, educators, and clinicians. This edition is also tailored to meet the needs of patients. The editors are excellent authorities in critical care nursing. All three are practitioners, and one is both practitioner and educator. The contributors and reviewers are critical care experts. The illustrations are used best to understand critical care technology. The graphics used for anatomy, physiology, and patient assessment add to the usefulness of the text. The references are pertinent and current, but certain specialty content would need to be updated by the reader (e.g., medication protocols for CHF). The use of color in the text is managed carefully to guide and not overpower the reader. The 1997 ACLS Guidelines are in Appendix 1. The Answer Key to Study Questions appears in Appendix 2. Anatomy and physiology, patient assessment and clinical management, nursing research, collaborative plans of care, teaching, and home care issues are some of the innovations presented. One strength of book is how it addresses the changes associated with aging and the needs of the older adult. Aging concerns are covered in one chapter and are highlighted throughout the text. This edition provides current information that makes the previous edition out of date. I would recommend this text for beginning critical care nurses and for undergraduate nursing students for its coverage of advanced pathophysiological concepts.

The third edition of the best-selling *Critical Care Nursing* offers readers a fully up-to-date, evidence-based guide to the science and practice of nursing the critically ill patient. Organised into 16 chapters, this edition covers all essential aspects of critical care nursing, from how to manage and monitor specific problems within organ systems, to how to provide sympathetic and compassionate care. A new chapter on 'Managing major incidents and preparing for pandemics' has been introduced with an insight to this crucial aspect of contemporary global healthcare. Written by a team of experienced nurses, this textbook supports staff working across the continuum of critical care to deliver safe, knowledgeable care that is rooted in a strong clinical, evidence base.
