of the disease has to come first. Secondly, pathogenesis describes the development of the disease. Finally, pathophysiology describes the physiological process of the disease.

What is the Difference Between  
Pathophysiology and ...

## Read Free Definition

## Pathophysiology And

Pathophysiology and pathogenesis are two similar terms used to explain the occurrence of a disease and related mechanisms and characteristics.

Pathophysiology concerns the conditions observed during a disease state and the processes going on within an organism.

Pathogenesis mainly focuses on the origin
