Clam Dissection Guideline BACKGROUND: Clams are bivalves, meaning that they have shells consisting of two halves, or valves. The valves are joined at the top, and the adductor muscles on each side hold the shell closed. If the adductor muscles are relaxed, the shell is pulled open by ligaments located on each side of the umbo.

### ~~Clam Dissection Guideline~~

This brief 2-page dissection guide (PDF) explores the anatomy of the clam *Venus mercenaria*. The exercise includes a dissection procedure and related questions for assessment, which are broken into the following categories: external anatomy, siphons, internal portion of the left valve, internal anatomy, and digestive and circulatory system.

### ~~Dissection Guide for the Clam~~

The first dissection shows a clam which has been opened by cutting the large adductor muscles, which attach to both valves and thus function to close the shell. On the inside of the shell that has been separated, note the places where the adductor muscles attach.

### ~~APPENDIX C Dissection Guide: The Clam~~

DESCRIPTION. This guide outlines and shows how to do a clam dissection. Full-color photographs of external structure, internal structure, and cross section of a clam. 7 pages. This dissection guide was revised October 2014 with improved instructions and color images for a better dissection and easier identification of internal and external anatomy. MORE INFORMATION BOX.
