The current lack of monitoring tools during PNBs and objective documentation of PNBs places regional anesthesia practitioners in a uniquely vulnerable position in cases of adverse neurologic outcome. Although this may be less of a problem in institutions with tradition of using regional anesthesia, it can present a significant obstacle in practices wishing to introduce PNB procedures.

Documentation of Regional Anesthesia Procedures ...

Documentation of informed consent is an important aspect of regional anesthesia practice. Practice patterns vary widely on this issue, and specific written consent for nerve block procedures is often not obtained. However, the written documentation of this process can be important for a number of reasons:

Documentation Of Regional Anaesthesia Progress Note

Regional anesthesia has become an integral and common component of both intraoperative anesthesia and postoperative analgesia in infants and children. Advantages of regional blockade include the reduction of general anesthetic dose requirements, effective blunting of hemodynamic and autonomic responses, and excellent postoperative analgesia with decreased requirement of systemic analgesics and their concomitant side effects.

Regional Anesthesia - an overview | ScienceDirect Topics

Prescription of regional anaesthetic infusions Regional anaesthetic infusions are a specialised analgesic technique and are managed by CPMS. ONLY CPMS and Anaesthesia staff may prescribe regional anaesthetic infusions. The regional anaesthetic infusion is prescribed according to the guidelines on the Regional anaesthetic infusion prescription.

Documentation and Orders Cont. 3. Begin documenting the note. v. Call Schedule The regional service has a ghost pager that will be forwarded to the resident on call. The number is 25625 (which spells out "block"). The OSC resident carries the call pager as they place most of our outpatient catheters.

v2.12-12 Regional Anesthesia Resident Handbook

How Auditors Review Documentation. Documentation becomes critically important whenever a practice faces an audit from an auditor. Auditors check documents to determine, among other things, that the anesthesia provider continuously monitored the patient and that the anesthesia time was properly documented. For example, auditors want to see notation that the provider checked the patient's vitals once every five minutes at the very least.

(PDF) Guideline Implementation: Local Anesthesia

It is important that a number of safety measures are taken to ensure the most suitable regional anaesthesia (RA) technique is performed for the correct patient. These measures include obtaining patient consent, checking all equipment and drugs, ensuring appropriate monitoring and performance of a correct surgical site check.

Establishing a new national standard for the documentation ...

High Regional Block (including Total Spinal Anaesthesia) 1. INTRODUCTION The occurrence of a high regional block or total spinal can be potentially catastrophic for both mother and baby, and require immediate management. They may occur following spinal or epidural anaesthesia and therefore can occur outside of the operating theatre. Both

Total and High Spinal Anaesthesia

3. There is no documentation that the procedure was performed using regional anesthesia and there is no documentation that regional anesthesia was attempted but unsuccessful or unable to determine from the medical record documentation. Notes for Abstraction: If regional anesthesia was performed/attempted in combination with a modality listed in the Exclusion Guidelines, select "1" or "2" as appropriate.

Regional Anesthesia (v2019A)

The anesthesia record is extremely important as a data sheet during anesthesia, as a source of information for later anesthetics, and as a legal document. It should contain all of the pertinent preoperative information, including the patient's medical history, significant laboratory values, time of last food or liquid intake, vital signs, and a record of a focused physical examination.
