The development of the transformational approach to the theory of language structure in the past decade has stimulated new ways of looking at a number of linguistic questions. This book seeks to provide an account of the structure of the noun phrase in English and Hindi within such a framework.

Game studies has been an understudied area within the emerging field of digital media and religion. Video games can reflect, reject, or reconfigure traditionally held religious ideas and often serve as sources for the production of religious practices and ideas. This collection of essays presents a broad range of influential methodological approaches that illuminate how and why video games shape the construction of religious beliefs and practices, and also situates such research within the wider discourse on how digital media intersect with the religious worlds of the 21st century. Each chapter discusses a particular method and its theoretical background, summarizes existing research, and provides a practical case study that demonstrates how the method specifically contributes to the wider study of video games and religion. Featuring contributions from leading and emerging scholars of religion and digital gaming, this book will be an invaluable resource for scholars in the areas of digital culture, new media, religious studies, and game studies across a wide range of disciplines.

This book offers a material critique on various aspects of Indian literary production and its reception by its audiences. Taking a historical and contemporary lineage into account, the author variously discusses the social, political, and economic factors that impact upon and determine choices in the publishing world. Examining the constructions of the archive of postcolonial works by Indian writers in relation to nationalist histories, language wars, and the relationship between economic policies and literature, the book forcefully argues that why we read what we read is more than coincidental. Placing the rights of minoritized and disadvantaged communities at the heart of the analysis of India ' s decolonization and industrial projects, the book attempts to address not just inequalities in the publishing world, but also social inequities engendered by global capitalism. Offering a critique of academics who act as cultural gatekeepers of intellectual production, the book finally underscores the disconnect between the academic theory and practice of scholars of postcolonial studies who argue against inequality and marginalization while simultaneously supporting hegemonic academic practices. This book will be of interest to scholars of development studies, cultural studies, literature, postcolonial studies, economics, and those studying globalization, as well as the interested lay reader.
