This popular and highly-acclaimed series includes an abundance of photos, accurate line drawings, fascinating evaluations of aircraft design, and complete histories of aircraft manufacturers.

Charlene Schurch and Beth Parrott invite knitters to stay close-knit using patterns from sock clubs everywhere! In today's knitting community, socks are hot--they're small, inexpensive, quick to finish, and completely portable. With this collection of 23 patterns, knitters of all skill levels will find something to tickle them down to their (sock-covered) toes! Discover unique patterns from local and Internet yarn stores as well as indie dyers and designers Learn techniques including top-down and toe-up knitting, various heel construction methods, cable and lace patterning, embellishing, and customizing sock sizing Enjoy a sense of connection and camaraderie with others in the knitting world

With the changing landscape of the transport sector, there are also alternative powertrain systems on offer that can run independently of or in conjunction with the internal combustion (IC) engine. This shift has actually helped the industry gain traction with the IC Engine market projected to grow at 4.67% CAGR during the forecast period 2019-2025. It continues to meet both requirements and challenges through continual technology advancement and innovation from the latest research. With this in mind, the contributions in Internal Combustion Engines and Powertrain Systems for Future Transport 2019 not only cover the particular issues for the IC engine market but also reflect the impact of alternative powertrains on the propulsion industry. The main topics include: • Engines for hybrid powertrains and electrification • IC engines • Fuel cells • E-machines • Air-path and other technologies achieving performance and fuel economy benefits • Advances and improvements in combustion and ignition systems • Emissions regulation and their control by engine and after-treatment • Developments in real-world driving cycles • Advanced boosting systems • Connected powertrains (AI) • Electrification opportunities • Energy conversion and recovery systems • Modified or novel engine cycles • IC engines for heavy duty and off highway Internal Combustion Engines and Powertrain Systems for Future Transport 2019 provides a forum for IC engine, fuels and powertrain experts, and looks closely at developments in powertrain technology required to meet the demands of the low carbon economy and global competition in all sectors of the transportation, off-highway and stationary power industries.

Endgames often give rise to the most difficult and pivotal moments of a chess game. International Master Esben Lund tackles this crucial topic in a unique and innovative way, focusing on the 16 Parameters involved in this type of decision-making. The book contains more than a hundred carefully chosen exercises, and gives the player a clear way to improve his or her understanding and skill.

Intellectual property rights, agriculture, and the world bank; Perspectives from international agricultural research centers; Perspectives from industry; Perspectives from national systems and universities; A model for international owned goods; Summary and implications for the world bank.

This book covers the main electronics components of the Diesel Common Rail injection systems. It goes into details on Piezo-injectors, fuel pressure sensors, high pressure operation, electrical characteristics of the injector pulse, pressure regulator, injector crystal stack description and its electronics. A complete first book for anyone, technician or layman alike to get his/her bearings on the technology.
