What's the problem with literacy at college? How might everyday literacy be harnessed for educational ends? Based on the first major study of literacy practices in colleges in the UK, this book explores the reading and writing associated with learning subjects across the college curriculum. It investigates literacy practices in which students engage outside of college, and teaching and learning strategies through which these can help support the curriculum. With insightful analyses of innovative practices, it considers ways of changing teaching practices to enable students to draw upon their full potential. Recent research work has challenged the myth of individual student deficit, arguing cogently that people have 'funds of knowledge' from diverse and vibrant cultural roots, and that these have been misguidedly disqualified by the education system. It has claimed that different 'ways with words' can provide valuable resources for learning. However, the empirical exploration of this claim has lagged far behind the theoretical debate. Improving Learning in College resolves this by showing the integrity and richness of the literacy practices of a significant population, not previously the focus of such research: those who take vocational and academic college courses in colleges. It addresses an issue which has not until now been developed within this research tradition: that of how these practices can not only be valued and validated, but mobilised and harnessed to enhance learning in educational settings. This book will interest all teachers, teacher-educators and researchers concerned with post-compulsory education and vocational education in compulsory schooling.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Provides information for students wishing to narrow their choice of course before turning to prospectuses - saving them precious time when they need it most. Grouped by study field, this volume is divided into subject chapters with courses arranged alphabetically by title and institution.

Festival and Events Management: an international perspective is a unique text looking at the central role of events management in the cultural, tourism and arts industries. With international contributions from industry and academia, the text looks at the following: * Events & cultural environments * Managing the arts & leisure experience * Marketing, policies and strategies of art and leisure management Chapters include exercises, and additional teaching materials and solutions to questions are provided as part of an accompanying online resource.

First published in 2006. Routledge is an imprint of Taylor & Francis, an informa company.

The three key sections in this course book are the business environment (including organisations, responsibilities and people), the economic, social and global environment and international and European trade. It provides a concise presentation of the key areas of both national and international economics. Features include summary diagrams, worked examples and illustrations, activities, discussion topics, chapter summaries and quick quizzes, all presented in a user friendly format that helps to bring the subject to life.

Learn all you need to know about seven key innovations disrupting business analytics today. These innovations—the open source business model, cloud analytics, the Hadoop ecosystem, Spark and in-memory analytics, streaming analytics, Deep Learning, and self-service analytics—are radically changing how businesses use data for competitive advantage. Taken together, they are disrupting the business analytics value chain, creating new opportunities. Enterprises who seize the opportunity will thrive and prosper, while others struggle and decline: disrupt or be disrupted. *Disruptive Business Analytics* provides strategies to profit from disruption. It shows you how to organize for insight, build and provision an open source stack, how to practice lean data warehousing, and how to assimilate disruptive innovations into an organization. Through a short history of business analytics and a detailed survey of products and services, analytics authority Thomas W. Dinsmore provides a practical explanation of the most compelling innovations available today. **What You'll Learn** Discover how the open source business model works and how to make it work for you See how cloud computing completely changes the economics of analytics Harness the power of Hadoop and its ecosystem Find out why Apache Spark is everywhere Discover the potential of streaming and real-time analytics Learn what Deep Learning can do and why it matters See how self-service analytics can change the way organizations do business **Who This Book Is For** Corporate actors at all levels of responsibility for analytics: analysts, CIOs, CTOs, strategic decision makers, managers, systems architects, technical marketers, product developers, IT personnel, and consultants.

A syllabus-specific textbook providing worked examples, exam-level questions and many practice exercises, in accordance to the new Edexcel AS and Advanced GCE specification.

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.
