Some examples of the information measures examined are: Shannon information, applied in coding theory; Akaike information criterion, used in system identification to determine auto-regressive models and in neural networks to identify the number of neurons; and Cramer-Rao bound or Fisher information, describing the minimal variances achieved by unbiased estimators.

Read Book Information Measures Information And Its Description In Science

Information theory measures the amount of information in data that could have more than one value. In its most common use, information theory finds physical and mathematical limits on the amounts of data in data compression and data communication. Data compression and data communication are statistical, because they guess unknown values.
