Chapter 4 Tissues. • Four major tissue types - Epithelial (epithelium) 1. covers and lines body parts (sheets of cells) 2. glandular epithelium a. two major types 1) endocrine glands secrete hormones to blood (no ducts) 2) exocrine secrete products into ducts that open to skin or lumen of organ b. structural classification of exocrine glands 1) multicellular - form a distinctive structure or organ (e.g., sweat, salivary) 2) unicellular - have no ducts but still considered exocrine (e.g ...

Anatomy Lecture Notes Update 2017 - Laney College  
Physiology tells us how the bodies of living organisms work. Physiology is based on the gross and microstructure. Both structure and function must be studied at all levels from the cellular to the molecular to the intact organism. All aspects of human physiology evolved in the thousands of inherited units of DNA called genes.
