PACP - What does PACP stand for? The Free Dictionary

PACP (Pipeline Assessment Certification Program) is the North American Standard for pipeline defect identification and assessment, providing standardization and consistency to the methods in which pipeline conditions are identified, evaluated and managed.

Pipeline Assessment (PACP) | NASSCO

PACP Inspection Reporting Mode PipeLogix was first certified by NASSCO in 2003 to PACP version 2.2. Since then NASSCO has required stricter certification standards and also released LACP and MACP. When NASSCO decided to upgrade from PACP version 6 they formed a committee and spent over 3 years in discussion to improve the standard.

PACP Pipeline Inspection Reporting Software | PipeLogix

PACP is an excellent system; however, its level of detail imposes a learning curve for users. With so many codes and requirements to ensure correct, consistent data, gaining familiarity takes time. For new users, this involves cross-referencing observations to a thick binder of descriptions and example photos.

Simplifying PACP: A Code Reference Poster

The mission of PACP is to enhance the quality and relevance of chamber management in the Commonwealth of Pennsylvania. To achieve this mission, PACP is dedicated to providing direct professional assistance and quality education to its members.

No one imagined that greed and deviousness would reach such a staggering level that thought exist only in movies and investigative drama shows , yet it became a stark reality when some merchants sought to make a profit on the account of health and safety of the young and adults alike utilizing the God-given ...

Background: Research has shown that advance care planning concepts for adults are not directly applicable to the pediatric setting. A specific pediatric advance care planning intervention (pACP) is still missing.Aim: To develop a pACP intervention for children with life-limiting diseases.Methods: We selected bereaved parents and (health) care professionals (HCPs) by purposeful sampling and invited them to participate in a one-day transdisciplinary workshop (participatory approach). We assigned participants to one of 3 focus groups (parents, pACP-facilitation, pACP-implementation) to discuss the different perspectives and identify needs, barriers and helpful aspects of pACP. Data were analyzed by content analysis. Results: The main topics identified were 1) Timing, 2) Communication, 3) Decision making, 4) Documentation, and 5) Implementation.Some participants had difficulties to identify pACP as an explicit process separate from palliative care as a whole. Timing subtopics included parentsu2019 readiness, and wrong or missed time points. Decision-making was not restricted to the pACP conversations. Parents needed to discuss their decisions as a couple and with their significant others. They requested that pACP discussions be open and non-judgmental. Parents did not want to be urged to decide. They needed to address their fears and to focus on their childu2019s personality and quality of life. Both parents and HCPs wanted to prepare for crises. HCPs emphasized the documentation of parentsu2019 preferences of care and emergency plans. All participants perceived pACP as an iterative process that allows decisions to be adapted to the childu2019s changing condition. Coping with emotional distress and dissent between professionals and parents were perceived as challenging.Discussion: The analysis of the three focus groups allowed the identification of key elements for a specific pACP intervention. These elements will form the basis for the participative development of a specific pACP framework.

These proceedings of the 5th Prouts Neck Meeting on Prostate Cancer, held in October, 1989, highlight the many advances in the understanding of prostatic growth and function at the cellular and molecular levels which have been registered since the first Prouts Neck Meeting in 1985, a meeting which also focused on the then current concepts and basic approaches to understanding prostate cancer. Inter vening Prouts Neck Meetings in 1986, 1987 and 1988 were devoted to treatment, image cytometry and clinical markers. As before, the Prouts Neck tradition of bringing together an international, multidiscipli nary group of experts for 3 days to exchange ideas and new data, in the relaxed atmosphere of an old iun on the scenic Maine coast, proved to be an ideal combination for a highly successful conference. Accordingly, the Organ System Program of the National Cancer Institute plans to use the Prouts Neck model for future conferences on other solid tumors (bladder in 1990 and kidney in 1991) and will return to the prostate in 1992. A new dimension was added to the current program through the inclusion of a poster session to recognize the research of pre-and postdoctoral investigators. The posters were judged by Drs. Collette Freeman, Frank French, Shutsung Liao, Robert Matusik and Henry Sun. The three winners, in alphabeti cal order, were John Fabian, Robert Getzenberg and Ming Fong-Lin.

Prostate cancer is the second leading cause of death in men and its progression is highly dependent on androgens and androgen receptors. However, even with treatment, eventually most prostate cancers progress. Studies of the mechanisms behind this progression leads to advances in treatments for androgen-related diseases. Our book discusses recent prostate cancer research which include the following topics: immunotherapy and chemotherapy; radiation, gene, hormonal, and androgen ablation therapies; basic mechanisms behind prostate cancer growth; how mechanisms can be used to treat prostate cancer; and research in newly developed mouse model systems. This book should be of interest as both a study guide and research reference to students, basic scientists, and clinicians.

Prostate Cancer provides an up-to-date review of the biochemistry, molecular biology, and genetic changes in prostate cells that are the driving forces in the initiation and progression of cancer. It includes an overview by experts in the field of cell-cell interactions, including stem cells, reactive Stromal cells and membrane lipid rafts that are instrumental in the initiation and progression of prostate cancer.

Over the past two decades, there has been a paradigm shift in public administration and public sector accounting around the world, with increasing emphasis on good governance and accountability processes for government entities. This is all driven both by economic rationalism, and by changing expectations of what governments can and should do. An important aspect of this accountability and governance process is the establishment and effective functioning of a Public Accounts Committee (PAC), a key component of democratic accountability. With contributions from renowned scholars and practitioners, and using case studies from around the world, this research-based collection examines the rationales for current roles of the PACs and explores the links between PACs and National Audit Offices. It also compares PAC practices from developing and developed countries such as Africa, Asia, Pacific islands, and Europe with both Westminster and non-Westminster models of government. This will be valuable reading for academics, researchers, and advanced students in public management, public accounting and public sector governance.

The only anthology available on material constitution, this book collects important recent work on well known puzzles in metaphysics and philosophy of mind. The extensive, clearly written introduction helps to make the essays accessible to a wide audience.

This book explores the complex relationship between international trade and poverty reduction through a combination of research papers and contemporary case studies. Written mainly by developing-country authors in consultation with local businesses and communities, the case studies contribute to our understanding of the ways in which low-income communities are dealing with trade as a practical challenge, especially in the Asia-Pacific region where approximately two-thirds of the world's poor live. While making it clear that there is no 'one size fits all' formula, the research and stories highlight a number of necessary preconditions, such as political commitment and cooperation at all levels, if trade is to successfully reduce poverty. Openness to trade, serious commitment to domestic reform, trade-related capacity building, a robust and responsible private sector and access to the markets of developed countries are all identified as powerful tools for building trade-related sustainable development.

Water and wastewater infrastructure are a somewhat invisible, yet critical, part of modern life. Incredibly, many buried assets have been in service for 50-100 years and are still in good condition. Conversely, other systems fail well before their predicted design lives, causing property damage, injury, and even loss of life. In many cases, early detection could have prevented catastrophic failure, and understanding the state of underground infrastructure has become a key priority for many municipalities. Industry has responded with a number of new and innovative technologies for condition assessment, however, understanding these tools can be difficult, as many vendors treat their proprietary systems as trade secrets. Water and Wastewater Pipeline Assessment Technologies: Classification Systems, Sensors, and Results Interpretation provides a thorough guide to the technical workings of some of the most popular water and wastewater assessment technologies available, including CCTV crawlers, acoustic listening devices, laser sensors, 360' video cameras, pipe penetrating radar, and more. Features: Presents an overview of current technologies in CCTV inspection, including next generation video formats, high-definition resolution, and fisheye/sidescan technology. Provides helpful tips and tricks to cut through technical jargon and identify the technological specifications to compare between multiple vendors. Examines the pros and cons of competing technologies including laser and lidar, and provides an overview of unique approaches such as Pipe Penetrating Radar, Focused Electrode Leak Location, and more. Highlights the importance of coding standards, data management, and software tools that can be leveraged to create a successful asset management program. Water and Wastewater Pipeline Assessment Technologies: Classification Systems, Sensors, and Results Interpretation provides a mixture of theory and real-world, practical considerations ranging from deployment tips and data exchange formats to the technical limitations of different technologies. The book is a valuable resource for municipal employees, project engineers, and others involved in designing and implementing major inspection programs.
