Perl officially stands for Practical Extraction and Report Language, except when it doesn't. Perl was originally a language optimized for scanning arbitrary text files, extracting information from those text files, and printing reports based on that information. It quickly became a good language for many system management tasks.

Perl Documentation - Perldoc Browser

Perl used to be the most popular web programming language due to its text manipulation capabilities and rapid development cycle. Perl is widely known as "the duct-tape of the Internet". Perl can handle encrypted Web data, including e-commerce transactions. Perl can be embedded into web servers to speed up processing by as much as 2000%.

If you are a Win32 user, please refer to the Win32 installation document. First, download the mod\_perl 2.0 source. Before installing mod\_perl, you need to check that you have the mod\_perl 2.0 prerequisites installed. Apache and the right Perl version have to be built and installed before you can proceed with building mod\_perl.

User's guide - mod\_perl: Welcome to the mod\_perl world

Any Perl/Tk application starts by creating the Tk MainWindow. You then create items inside the MainWindow, and/or create new windows called Toplevels that also contain child items, before starting the MainLoop, which is the last logical statement in your program. You can also create more items and windows while you're running, using callbacks.
