Usually visible within 30 min to 2 h following death, maximal development is usually 8–12 h postmortem; after 8–12 h postmortem, lividity may become fixed and will no longer blanch when pressure is applied to the skin

Forensic Pathology | Basicmedical Key

Exceedingly important in forensic pathology, postmortem toxicology is a well-developed science beyond the scope of this book. The reader is referred to several excellent textbooks 81–83 and comprehensive reviews 84–86 of forensic toxicology for additional information. In all forensic cases, even when drug overdose or exposure to poisons is not suspected, collection of blood should be supplemented with collections of vitreous humor, urine, bile, gastric contents, and, in some instances, CSF.

Forensic Pathology - an overview | ScienceDirect Topics

Forensic pathology is a service provided to the coroners and police forces in England and Wales to assist in the investigation of homicide or suspicious death cases.
