and rotational bending effects, making it suitable for describing the behaviour of thick beams, sandwich composite beams, or beams subject to high-frequency excitation when the wavelength approaches the thickness of the beam. The resulting equation is of 4th order but, unlike Euler – Bernoulli beam theory, there is also a second ...

The solution is independent of the thickness t and the Poisson's ratio ν . The stress in the plug is approximately half the value that would occur in a completely restrained plug. Alternative Answer to Problem 3d (displacement method) When we substitute (1) and (2) in (4) we find $u = \frac{a}{EI} \left(\frac{1}{2} \left(\frac{1}{1+\nu} - \frac{1}{1-\nu} \right) \right)$.

The exact fields do coincide with the conventionally obtained solutions listed in Sections 18-23 of the book by Timoshenko and Goodier (1982) , and in Chapter II, § 10 of Szab ó (1985) .
