Seriously - all that I kept thinking was Einstein's quote, "doing the same thing over and over again and expecting different results is the definition of insanity."

### What Every Environmentalist Needs to Know About Capitalism ...

What every environmentalist needs to know about capitalism by Fred Magdoff Why is this a favourite book? This book speaks to human ecology, an area largely neglected by biologists. One of the reasons for this could be that we operate under a production system that fetishizes human ecology. In this short primer the authors speak directly to the ...

### What Every Environmentalist Needs To Know About Capitalism ...

What every environmentalist needs to know, of course, is that capitalism is not the solution but the problem, and that if humanity is going to survive this crisis, it will do so because it has exercised its capacity for human freedom, through social struggle, in order to create a whole new world—in coevolution with the planet.

### What Every Environmentalist Needs to Know About Capitalism ...

Praise for Foster and Magdoff’s The Great Financial Crisis: In this timely and thorough analysis of the current financial crisis, Foster and Magdoff explore its roots and the radical changes that might be undertaken in response. . . . This book makes a valuable contribution to the ongoing examination of our current debt crisis, one that deserves our full attention.—Publishers Weekly There is a growing consensus that the planet is heading toward environmental catastrophe: climate change, ocean acidification, ozone depletion, global freshwater use, loss of biodiversity, and chemical pollution all threaten our future unless we act. What is less clear is how humanity should respond. The contemporary environmental movement is the site of many competing plans and prescriptions, and composed of a diverse set of actors, from militant activists to corporate chief executives. This short, readable book is a sharply argued manifesto for those environmentalists who reject schemes of “green capitalism” or piecemeal reform. Environmental and economic scholars Magdoff and Foster contend that the struggle to reverse ecological degradation requires a firm grasp of economic reality. Going further, they argue that efforts to reform capitalism along environmental lines or rely solely on new technology to avert catastrophe misses the point. The main cause of the looming environmental disaster is the driving logic of the system itself, and those in power—no matter how “green”—are incapable of making the changes that are necessary. What Every Environmentalist Needs To Know about Capitalism tackles the two largest issues of our time, the ecological crisis and the faltering capitalist economy, in a way that is thorough, accessible, and sure to provoke debate in the environmental movement.

"Pithy, funny, exasperated, and informed... You cannot read a more important hundred pages than Stop Saving the Planet!" —Richard White, author of The Republic for Which It Stands We’ve been "saving the planet" for decades!...And environmental crises just get worse. All this hybrid driving and LEED building and carbon trading seems to accomplish little to nothing—and low-income communities continue to suffer the worst consequences. Why aren’t we cleaning up the toxic messes and rolling back climate change? And why do so many Americans hate environmentalists? Jenny Price says Enough already! with this short, fun, fierce manifesto for an environmentalism that is hugely more effective, a whole lot fairer, and infinitely less righteous. She challenges you, corporate sustainability officers, and the EPA to think and act completely anew—and to start right now—to ensure a truly habitable future.

Easy-to-read and filled with real-world examples of the most complex environmental challenges, this book demonstrates that sound economic analysis and reasoning can be one of the environmental community’s strongest allies. This is sure to become an invaluable resource for students, environmental organizations, and policymakers.

Sickened by the contamination of their water, their air, of the Earth itself, more and more people are coming to realize that it is capitalism that is, quite literally, killing them. It is now clearer than ever that capitalism is also degrading the Earth’s ability to support other forms of life. Capitalism’s imperative—to make profit at all costs and expand without end—is destabilizing Earth’s climate, while increasing human misery and inequality on a planetary scale. Already, hundreds of millions of people are facing poverty in the midst of untold wealth, perpetual war, growing racism, and gender oppression. The need to organize for social and environmental reforms has never been greater. But crucial as reforms are, they cannot solve our intertwined ecological and social crises. Creating an Ecological Society reveals an overwhelmingly simple truth: Fighting for reforms is vital, but revolution is essential. Because it aims squarely at replacing capitalism with an ecologically sound and socially just society, Creating an Ecological Society is filled with revolutionary hope. Fred Magdoff and Chris Williams, who have devoted their lives to activism, Marxist analysis, and ecological science, provide informed, fascinating accounts of how a new world can be created from the ashes of the old. Their book shows that it is possible to envision and create a society that is genuinely democratic, equitable, and ecologically sustainable. And possible—not one moment too soon—for society to change fundamentally and be brought into harmony with nature.

A clear, evocative, and well-documented refutation of the idea that overpopulation is at the root of many environmental problems.

Winner, 2020 Isaac and Tamara Deutscher Memorial Prize A fascinating reinterpretation of the radical and socialist origins of ecology Twenty years ago, John Bellamy Foster’s Marx’s Ecology: Materialism and Nature introduced a new understanding of Karl Marx’s revolutionary ecological materialism. More than simply a study of Marx, it commenced an intellectual and social history, encompassing thinkers from Epicurus to Darwin, who developed materialist and ecological ideas. Now, with The Return of Nature: Socialism and Ecology, Foster continues this narrative. In so doing, he uncovers a long history of efforts to unite issues of social justice and environmental sustainability that will help us comprehend and counter today’s unprecedented planetary emergencies. The Return of Nature begins with the deaths of Darwin (1882) and Marx (1883) and moves on until the rise of the ecological age in the 1960s and 1970s. Foster explores how socialist analysts and materialist scientists of various stamps, first in Britain, then the United States, from William Morris and Frederick Engels to Joseph Needham, Rachel Carson, and Stephen J. Gould, sought to develop a dialectical naturalism, rooted in a critique of capitalism. In the process, he delivers a far-reaching and fascinating reinterpretation of the radical and socialist origins of ecology. Ultimately, what this book asks for is nothing short of revolution: a long, ecological revolution, aimed at making peace with the planet while meeting collective human needs.

Bridges the gap between social and environmental critiques of capitalism In the nineteenth century, Karl Marx, inspired by the German chemist Justus von Liebig, argued that capitalism’s relation to its natural environment was that of a robbery system, leading to an irreparable rift in the metabolism between humanity and nature. In the twenty-first century, these classical insights into capitalism’s degradation of the earth have become the basis of extraordinary advances in critical theory and practice associated with contemporary ecosocialism. In The Robbery of Nature, John Bellamy Foster and Brett Clark, working within this historical tradition, examine capitalism’s plundering of nature via commodity production, and how it has led to the current anthropogenic rift in the Earth System.
