The innovative lift-truck transmission from ZF. The wide functionality of diesel lift trucks makes the highest demands on the driveline, in particular on the transmission. For example, gear-shifting must occur under full load without interruption in traction and without jerking. With the ERGOPOWER series ZF offers a whole range of transmissions which have been specially conceived for the requirements of lift trucks and other materials transport vehicles.

ERGOPOWER - ZF - ZF Friedrichshafen  
The ZF-Powershift Transmission 4 WG-92/98 TSC is composed of a hydrodynamic torque converter and a rear-mounted multi-speed powershift reversing transmission with integrated transfer case (see Table-1). The torque converter is a wear-free starting device which is adapting itself infinitely variable to the required conditions (road resistance).

ZF - POWERSHIFT TRANSMISSION 4 WG-92/98 TSC - JLG Industries  
The innovative transmission for the special challenges of ground support equipment (GSE) With the ERGOPOWER series ZF offers a whole range of transmissions which have been specially conceived for ground support equipment. ZF provides solutions for a broad range of GSE vehicles like aircraft tow tractors, cargo loaders, belt loader, passenger stairs, and towbarless tractors.

Description. ZF WG powershift transmission offers everything technically possible to make wheel loader application more efficient,effective and safe. Through modular design,WG transmission can be tailored to exact technical needs.Depending on application and maximum speed,there is a choice for 3 or 4 forward and reverse gears.Since wheel loader work 30% of the time in reverse,closed gear stepping in forwards and reverse are particularly important for efficiency and service life.

Mine-protected and mine-resistant, ambush-protected (MRAP) vehicles are today standard in the US, most major western armed forces and many other armies as a result of the wars in Iraq and Afghanistan. The South African Army was already routinely using mine-protected armored personnel carriers and patrol vehicles forty years ago even if they looked primitive and ungainly. A few years later, the South African Army had reached the stage where it could deploy entire combat groups into battle zones equipped with only mine-protected vehicles, including their ambulances and supply trucks. By then the mine-protected vehicles had also become effective for use in combat, rather than just protected transport, the Casspir being the chief example. More to the point, they saved countless soldiers and policemen from death or serious injury, and the basic concepts now live on in the various MRAP types in service today. The valuable lessons learned by the South Africans with their early designs of these combat-proven vehicles has led the country to become one of the global leaders in the design of MRAPs which are locally manufactured and exported around the world. Surviving the Ride is a fascinating pictorial account featuring more than 120 of these unique South African-developed vehicles, spanning a forty-year period, with over 280 photographs, many of which are previously unpublished.

The book compiles the research works related to smart solutions concept in context to smart energy systems, maintaining electrical grid discipline and resiliency, computational collective intelligence consisted of interaction between smart devices, smart environments and smart interactions, as well as information technology support for such areas. It includes high-quality papers presented in the International Conference on Intelligent Computing Techniques for Smart Energy Systems organized by Manipal University Jaipur. This book will motivate scholars to work in these areas. The book also prophesies their approach to be used for the business and the humanitarian technology development as research proposal to various government organizations for funding approval.

The IFIP series publishes state-of-the-art results in the sciences and technologies of information and communication Proceedings and post-proceedings of referred international conferences in computer science and interdisciplinary fields are featured. These results often precede journal publication and represent the most current research. The principal aim of the IFIP series is to encourage education and the dissemination and exchange of information about all aspects of computing.

Hybrid drives and the operation of hybrid vehicles are characteristic of contemporary automotive technology. Together with the electronic driver assistant systems, hybrid technology is of the greatest importance and both cannot be ignored by today's car drivers. This technical reference book provides the reader with a firsthand comprehensive description of significant components of automotive technology. All texts are complemented by numerous detailed illustrations.
